PRESS RELEASE

ACE Survey:
In worsening conditions a glimmer of hope

The Architects’ Council of Europe’s (ACE)¹ has just completed its fifth quarterly survey on the impact of the global financial crisis on the architectural sector in Europe. The results clearly show that the situation is at the present time worse than at any time since the crisis began in September 2008 but that architects are hopeful of an upturn in workload in the coming quarter.

The ACE Survey received over 3,750 responses from all countries in Europe and the results have been analysed and weighted to give statistical reliability. They show that 65.5% of those who responded believe that the situation is bad or very bad at the present time. This figure is the worst recorded in the five editions of the survey that have been conducted by the ACE.

Paradoxically, the respondents were, with 43%, more optimistic that there will be an increase in workload and new orders in the coming three months. This is the first time that those who are optimistic (43%) outweigh those who are pessimistic (21%). In addition, there were 17% of respondents that expect to see an increase in staff numbers in the next three months compared to 15.5% who expect a decrease in the same period.

These are positive signs and provide a glimmer of hope that the worst is now and that an improvement may come in the next quarter.

As the architectural profession is a profession that is the first to feel the cold wind of recession and the first to feel the warm breeze of a recovery, these opinions give a little hope that maybe the worst is just about over. The prospect that these results are the signs of a recovery in the short term are exciting indeed and the ACE looks forward in conducting its next survey in June 2010 in order test if this trend will continue.

¹ The Architects’ Council of Europe (ACE) is the European organisation representing the architectural profession at European level with its headquarters and Secretariat located in Brussels. Its President for 2010 is Mrs. Selma Harrington, architect from Ireland. Its growing membership consists of Member Organisations, which are the nationally representative regulatory and professional bodies of all European Union (EU) Member States, Accession States, Switzerland and Norway. Through them, it represents the interests of about 480,000 architects. The principal function of the ACE is to monitor developments at EU level, seeking to influence those areas of EU Policy and legislation that have an impact on architectural practice and on the overall quality and sustainability of the built environment.
